EXPERIENCE

Cloud FinOps & Financial Analysis Intern | *SitusAMC* Jun 2026 – Present

- Built **6+** executive financial reporting solutions across Corporate IT, Global Prepaid, and SG&A, processing **14.2M+** journal entries into interactive C-Suite and MD-level dashboards, enabling drill-down across **3** business segments and **90+** products.
- Evaluated **7+** FinOps platforms across **25+** functional, security, and pricing criteria, creating MoSCoW-prioritized comparison matrices that consolidated fragmented vendor research into a single, leadership-ready platform recommendation.
- Designed a prioritization and owner-routing framework for cloud optimization reviews – analyzing **100,000+** CloudHealth policy alerts and **30+** historical reports to cut alert noise by **90%** and route findings directly to the right cost owners.
- Authored **20+** reusable internal documents adopted across Legal, InfoSec, and Vendor Management, used weekly for AWS account validation, and integrated into a custom GPT to auto-prioritize and route optimization recommendations.
- Developed Custom GPT workflows and reusable prompt templates for vendor research, reporting, documentation, and recurring analysis, reducing manual work time by **~3–4 hours** per week and improving consistency across active FinOps workstreams.
- Collaborated with **10+** stakeholder groups across FinOps, Accounting, FP&A, Platform Engineering, and Legal to close process gaps, translating findings into recommendations adopted at the MD/leadership level.

AI & Machine Learning Research Assistant | *Florida Blue x USF* Oct 2025 – May 2026

- Fine-tuned Med42-8B LLM using a QLoRA pipeline in **Python** across **6 training runs**, reducing training loss from **2.20 → 0.10** across **14,000+** clinical prompt-response pairs and outperformed both Med42 & GPT-3.5 by over **+0.45** in ROUGE benchmarks.
- Developed a drug recall evaluation, achieving **71.4%** accuracy, demonstrating the model learned complex oncology reasoning.
- Engineered training dataset of **5,200+** synthetic records using GDC/TCGA data standards to address the absence of public data.
- Built **SQL**-based data pipelines to analyze **10,000+** lung cancer EHR records to surface patterns in patient survival.
- Co-authoring a research paper on domain-specific LLM fine-tuning for clinical decision support using synthetic data pipelines.

Data Analytics Tutor | *Knack* May 2024 – May 2026

- Created individualized learning plans for **20+** students with data-driven insights, resulting in a **25% average improvement** in scores.
- Leveraged **Tableau** and **Excel** to provide visual, data-driven feedback that accelerated student comprehension and performance.

Data Analytics Intern | *Colegio Yannette* Apr 2020 – Jun 2020

- Managed the registration and updates of critical data for **200+ student records** in a remote database system, ensuring data integrity.
- Organized student record management through systematic **Excel** data entry, reducing errors and improving operational reporting.

PROJECTS

Oncology AI Clinical Decision Support System | Python, PyTorch, QLoRA/LoRA, Hugging Face, Hex, GCS | Site

- Fine-tuned Med42-8B on a synthetic lung cancer dataset using QLoRA and 4-bit quantization, reducing training loss from **2.20 → 0.10** across **14,000+** clinical prompt-response pairs, outperforming Med42 and GPT-3.5 by over **+0.45** on ROUGE benchmarks.
- Developed a drug recall evaluation framework across 50 clinical test cases, achieving **71.4%** pharmacological validity, therefore demonstrating that the model learned oncology reasoning beyond formatting patterns.
- Built end-to-end QLoRA fine-tuning pipeline using bitsandbytes, PEFT, and TRL with LoRA adapter training and versioning.
- Designed a data analysis pipeline in Hex: Kaplan-Meier curves, cohort distribution dashboards, and data quality audits.

S&P 500 Market Regime & Sector Rotation Analysis | Python, Pandas, NumPy, Matplotlib, Seaborn, yfinance | Site

- Engineered **15+** technical features across **2.9M+** daily prices, enabling multi-horizon return forecasting and sector analysis.
- Designed a market regime classification system to produce **9** distinct market states, surfacing outperforming sectors historically.
- Built market-level indicators, including % of stocks above SMA-50/200 & advance/decline ratios, providing macro-level insights.

Hospital Operations & Patient Flow Analytics | PostgreSQL, Python, Tableau, Google Cloud (GCP) | Link

- Analyzed **1000+** appointment records to identify high-traffic departments handling **~30%** more appointments than average.
- Designed a 7-table relational database with patients, doctors, departments, and appointments using **SQL** and **Google Cloud**.
- Developed SQL-driven **KPIs** and **Tableau** visualizations aimed at reducing wait times and improving hospital management.

SKILLS

- **Languages**: Python, SQL (PostgreSQL, MySQL, Oracle), Spanish (fluent)
- **Data & ML**: pandas, NumPy, Matplotlib, Seaborn, scikit-learn, PyTorch
- **Cloud & FinOps**: AWS, Azure, CloudHealth, Google Cloud Platform (GCP), Snowflake, MongoDB
- **Analytics & BI Tools**: Tableau, Power BI, Excel, Hex, dbt, Git, Shell

CERTIFICATIONS

- DataCamp SQL Associate, DataCamp Data Analyst Associate, Citizen Data Science Certificate (Tableau)

EDUCATION

BS, Business Analytics and Information Systems Aug 2022 – May 2026

University of South Florida, Tampa, FL

- Bright Futures Academic Scholarship
- Member - Association of Latino Professionals for America (ALPFA)
- Study Abroad in Finance, Florence University of the Arts
